

Lady Mary Montagu Lecture Series

Excellent Women in Immunology

Lady Mary Wortley Montagu:
A daring young English aristocrat
who brought smallpox variola-
tion from the Orient to England,
a true vaccination pioneer
and an extraordinary
woman of her times.

Prof. Dr. Susana Minguet

Harnessing TCR Discoveries for the Next Generation of Immunotherapies

Chair: Prof. Dr. med. Evelyn Ullrich

29.01.2025, 4 - 6 pm

via zoom, register via www.dgfi.org/lady-mary

Susana Minguet, a biochemist who developed her scientific career between Spain and Germany, is passionate about understanding the immune system. Inspired by the parallels between Hieronymus Bosch's „The Garden of Earthly Delights“ and the complexity of immune interactions, she has dedicated her career to deciphering this seemingly chaotic system. Her research aims to leverage this knowledge to engineer novel immunotherapies.

As an accomplished scientist and mentor, Susana is committed to training the next generation of international researchers in immunology.
